The Peabody Picture Vocabulary Test Fourth Edition (PPVT-IV) is a multiple-choice vocabulary test for individuals aged 2 years 6 months to 90 years plus. It measures receptive vocabulary (the ability to understand spoken words) in Standard American English. The PPVT-IV is a norm-referenced, untimed test that is easy to administer and can be scored quickly. It is designed to measure vocabulary knowledge and to provide information about academic performance. The PPVT-IV includes two forms: Form A and Form B. The test is administered by presenting the examinee with sets of four drawings and asking them to choose the one that best fits the word spoken by the examiner. The test results are used to identify areas of strength and weakness in vocabulary knowledge and to make inferences about overall academic performance.
